ETHIOPIA

# **Federal Democratic Republic of Ethiopia**

## **Ministry of Water, Irrigation and Energy**

**Presentation**  
**on**  
**Water Supply services Management in Ethiopia**

by Zebider Alemneh  
May, 2015

1

## **Presentation outline**

### **1. Introduction**

### **2. Water Supply In Ethiopia**

#### **❖ Enabling Environment**

- Policy, Strategy
- Institutional Arrangement and Responsibility

#### **❖ Current Situation and Plan under implementation**

2

# 1. Introduction

- **Official Name**= Federal Democratic Republic of Ethiopia(FDRE)
- **Land Area** =1,100,000 square kilometers
- **Total Population** = 88,011,000 (2014), more than 80 Ethnic
- **Rural Pop.** = 80.9%, **Urban Pop.** = 19.1%
- **River Basin** = 9 Wet and 3 dry basins (SW= 122b<sup>3</sup>,GW=36-40b<sup>3</sup>)
- **Economy** = 46% Services, 40% Agriculture & 14% Industry
- **Economic Growth Rate** = More than 10% (for the last 10 years)
- **GDP/Capita** = 632 USD
- **Administration** = 9 Regions and 2 City Administration
- **World Heritage Sites** = 10 Heritage sites

3

## 2. Water Supply In Ethiopia

### Enabling Environment

#### ❖ Policy, Strategy and Plans

- Water Resources Management Policy (1999)
- Ethiopian Water Resources Management proclamation (197/2000)
- Ethiopian Water Sector Strategy (2001)
- Establishment of Regional Water Bureaus, Woreda Water Office, Town Water Utilities & Water Resource Development Fund
- Ethiopian Water Resources Management Regulations (115/2005)
- WIF (2013)
- Water Supply and Sanitation Plans
  - UAP I ( 2005-2012) , GTP-I (2010-2015) or Revised UAP ( 2010-2015)
- Recently One Wash National Program(OWNP) (2013-2020)

4

## Core principle of the Policy

### Water Supply (Urban)

- ✓ Enhance self-financed and total cost recovery programmes
- ✓ Insure that urban tariff structures are based on the basis of toward full cost recovery
- ✓ Establish progressive tariff rates, in urban water supplies, tied to consumption rates.
- ✓ Ensure that the management of water supply systems to be at the lowest and most efficient level of institutional set up

### Sanitation /Liquid waste/

- Recognize that water supply and sanitation services are inseparable and integrate the same at all levels through sustainable and coherent framework
- Promote the involvement of non-governmental organizations, external support agencies and the private sector in sustainable sanitation programmes.
- Control and ensure that water bodies are protected from pollution by waste water and other wastes

5

## National Water Strategy (2001)

regard to Water Supply and sanitation, mainly aims at:

- More decentralized decision-making
- Promoting the involvement of all stakeholders, including the private sector
- Increasing levels of cost recovery
- Integrating water supply, sanitation and hygiene promotion activities.

6

## Institutional Arrangement & Responsibility

### ...cont'd

- **Federal Ministry of Water, Irrigation & Energy (MoWIE)**
  - Formulate Policy , Strategy and National Plan and Establish Standards
  - Regulate and Coordination the implementation of Water supply and Sewerage systems
  - supervising and following up on the implementation of policy and strategy instruments as well as overall sector standards
  - Coordinate and Monitor Water Supply Projects financed by Federal Government Budget
  - Conduct capacity building activities
- **Water Resource Development Fund (Established by Federal Gov.)**
  - Grants long term loans to Town for Water Supply investment on the basis of the principle of cost recover
  - Set criteria for granting loans and administer the fund
  - Issue directives on the procedure of collection of the Fund and withdrawal and payments of money from the Fund;
  - Manage and Collect timely the down payment from water Utilities

## ...cont'd

- **Regional Water Bureaus (Established by Regional Government)**
  - executive organ responsible for the implementation of federal policies, strategies and action plans through adapting them to the specific conditions of the region
  - Plan, Implement, Monitor and Evaluate Water Supply projects
  - Coordinate and Monitor projects implemented by Woredas and Urban Water Utilities
  - Exercise regulatory duties delegated to them by the Ministry
  - Draft Laws and Regulation for Town Water Supply and Sewerage Enterprises
- **Zonal Water Office (Supporting arms of the Water Bureaus)**
  - Mandated to provide technical support to Woreda Water Offices and Town Water Supply Offices
  - Responsible for coordinating activities, consolidating plans and reports of woredas

9

## ...cont'd

- **Woreda Water Office**
  - Plan, Implement and Monitor, small water supply schemes
  - Conduct capacity building activities for WASHCOs
- **WASH Committee**
  - Operate and Maintain Rural Water Supply Schemes
- **Town Water and Sewerage Utilities**
  - Plan, Implement and Monitor water supply systems
  - Operate & Maintain Water supply systems
- **Town Water Board:-** Play overall management role of Town Water Supply Utilities (Big and medium towns)

10

## Current Water Supply Situation

### ○ Source of Water Supply

- Ground Water + Spring (>90%)
- Surface Water (<10%)

### ○ Technology in Use

- **Rural**:- HDW,MH, spring on spot, spring with distribution, SW on spot, BH with distribution, River diversion, Water harvesting techniques , etc
- **Urban** :- Spring with distribution, BH, River diversion with treatment plant, Dam(Reservoir) with treatment plant

### ○ Water supply Access Rate (as of July 2014, Ministry Report)

- Rural :- 75%,Urban =84%, Overall =76%
- Non functionality rate of Rural schemes=16%
- NRW in Urban Water Supply = 20%-50%

### ○ Current Water Supply Minimum Standard (GTP-I)

- Rural =15L/C/day within 1.5km
- Urban=20L/C/day within 0.5km

11

## ...cont'd

12

## Different Water Supply source and Technology in Use

## National Water Supply, Sanitation and Hygiene Program

- A 7 years plan (2013-2020) developed which is called One WaSH National Plan
- The plan /program is Instrument for achieving the goals set in GTP-I and beyond GTP for Water Supply, Sanitation & Hygiene
- The Plan includes institutional WaSH ( Health Centres & Schools)
- Implementers are Government , CSO ,NGOs and others
- Financers: Government, Donors, CSO, NGO & others
- MoU, WIF and POM produced and agreed by government side (MoWIE, MoH,MoE,MoFED & line sectors) and donors
- **Consolidated Wash Account(CWA)** is part of OOWNP and opened for the component financed by Four major donors(IDA,DFID,AfDB & UNICEF)
  - CWA (431 M USD) covers only 18-20 % of the total estimated cost of OOWNP
  - 70% fund for water supply and 30% for Institutional WaSH
  - Supports 382 Woredas & 144 Towns (124 Small & 20 Medium)

13

## Urban WS Future Plan

- Need to revise Minimum service level due to
  - Urban population growth is very fast
  - Industrialization is growing Rapidly
  - Usage of current household facility technologies is increasing
- Under GTP-II

Towns are categorized in to five groups and Minimum service level is also planned increase based on the category

| Category No. | Urban Category | Population        | Minimum Water Quantity (l/c/d) | Maximum Fetching distance(m) | No. of Towns |
|--------------|----------------|-------------------|--------------------------------|------------------------------|--------------|
| I            | Metropolitan   | > 1,000,000       | 100                            | -                            | 1            |
| II           | Big Cities     | 100,000-1,000,000 | 80                             | -                            | 16           |
| III          | Large Town     | 50,000-100,000    | 60                             | -                            | 19           |
| IV           | Medium Towns   | 20,000-50,000     | 50                             | -                            | 82           |
| V            | Small Towns    | < 20,000          | 40                             | 500                          | 767          |

14

## Challenges further needs attention and the Way forward

- ✓ Continuous engagement – to bring behavioral change( Education, Media, Community leaders, Community ownership/ participatory approach)
- ✓ Strengthening/set up of public services providers and regulatory body with clear mandates and responsibilities
- ✓ Conducting assessment study on sanitation situation and establishment of baseline for future intervention
- ✓ Consideration of the Urban Sanitation and Hygiene as key area during planning and implementation of projects

15

## ...cont'd

- ✓ Solving timely Land acquisition problems for construction of WaSH Facilities
- ✓ Encourage involvement of the private sector
- ✓ Formulate best practices ( domestic , overseas ) and implement
- ✓ Setting National targets and implement (Short term, Medium term and long term)
- ✓ Establishment of Understanding among Stakeholders /**Integration**, **Harmonization** ,**Alignment** and **partnerships**/
- ✓ Search of fund for investment /fund raising/
- ✓ Law enforcement ( **polluter and user pays** )
- ✓ Considering both Waste water issue and Water sources protection as a key issues in Urban Master plan preparation and updating

16

FIJI

# WATER SUPPLY ADMINISTRATION FOR BETTER MANAGEMENT OF WATER SUPPLY SERVICES (A)

**JICA, Tokyo, Japan**  
**17<sup>th</sup>- 30<sup>th</sup> May, 2015**

**Mr. Puamau Sowane**  
**Deputy Secretary Infrastructure**  
**Ministry of Infrastructure & Transport**  
**FIJI**

## ORGANIZATIONAL PROFILE

- **Name:** Ministry of Infrastructure and Transport
- **Official Position:** Deputy Secretary Infrastructure
- **Organizational Structure**

## WATER RESOURCES

- Fiji consists of 332 islands of which 110 are inhabited.
- The total land mass for Fiji = 18,274sq.km
- coastline =1,129km.
- Land use in Fiji is 9.03% arable land, 4.65% permanent crop and other takes up 86.32%.
- Irrigated land is 30sq.km
- Total renewable water resources is 28.55 cu.km
- freshwater withdrawal for domestic is 30%, industrial, 11% and 59% for agriculture.
- Precipitation - The wet season in Fiji is basically from November to April. During the wet season, tropical cyclones are also expected to occur. Fiji experiences average rainfall of 1000mm to 3500mm annually

| Annual Total Rainfall from 2005 to 2014 |                |                   |             |              |                 |             |        |        |
|-----------------------------------------|----------------|-------------------|-------------|--------------|-----------------|-------------|--------|--------|
| Year                                    | Labasa Airport | Savusavu Airfield | Penang Mill | Nadi Airport | Nausori Airport | Laucala Bay | Matuku | Lakeba |
| 2005                                    | 1876.2         | 1259.3            | 1516.9      | 1686.8       | 3276.6          | 3596.2      | 1120.2 | 2287.5 |
| 2006                                    | 2337.8         | 1270.8            | 1823.6      | 1689.2       | 2968.1          | 2796.7      | 1831.3 | 1383.3 |
| 2007                                    | 3162           | 2028.6            | 2616.2      | 2523.5       | 3309.2          | 3495.6      | 2259.4 | 2476.7 |
| 2008                                    | 3037.9         | 2680              | 3380.1      | 2459.4       | 2982.6          | 2572.5      | 1675.1 | 2815.5 |
| 2009                                    | 2545.5         | 2554              | 3040.6      | 2799.2       | 2868.9          | 2808.9      | 2144.6 | 1980.9 |
| 2010                                    | 2351.1         | 2048.5            | 1643.6      | 1334.2       | 3215.8          | 3310.1      | 1555.5 | 1873.5 |
| 2011                                    | 2261.4         | 1781.7            | 3238.7      | 2782.6       | 3064.6          | 3072.5      | 2685.5 | 2474.5 |
| 2012                                    | 2645.7         | 2790.8            | 3956.8      | 3547.9       | 3202.1          | 3383.7      | 2459.9 | 2325.2 |
| 2013                                    | 1049           | 1898.2            | 2342.7      | 2031.7       | 3224            | 3012.5      | 2102   | 2260.1 |
| 2014                                    | 692.2          | 1504.4            | 2109.6      | 1305.6       | 2904.4          | 3323.6      | 1404   | 1348.8 |

## MANAGEMENT OF WATER QUALITY

- Size of WAF's area of responsibility is basically the whole of Fiji archipelago with an area of 18,274 sq.km but is more concentrated on the two main islands, Viti Levu and Vanua Levu in which 98% of consumers resides in the urban and peri-urban areas
- The water quality in Fiji is monitored by the Ministry of Health.
- The Ministry had just launched the Fiji National Drinking Water Quality Standards.
- The challenges that is being faced in managing the water quality in Fiji is the various water sources especially in rural areas that is vulnerable to high contamination.

### Current Actions against the problems & achievements

- Water quality tests are carried out by Water Authority of Fiji and also the Department of Water & Sewerage.

### Monitoring System/Plan of Safety of Supplied Drinking Water

- Water Authority of Fiji has in place water safety plans for urban areas. The rural areas have the Rural Water and Sanitation policy that has in place the Water Supply Management Plan to cater for water safety planning.

## REDUCTION OF NON-REVENUE WATER

### Percentage of NRW in respective divisions

#### Year 2014:

- Central = 47.6%
- Western = 53.7%
- Northern = 30.5%
- National = 51% (Qtr. 4, 2014 – actual)

### Current situation

- The current stats for NRW for the three respective division are as follows:

- Central = 46.5%
- Western = 49.5%
- Northern = 26.9%
- National = 44.9% (Qtr. 1, 2015 – provisional)

Water Modelling Software Tool

### ***Current actions against Problems***

- Introduction of District Metering Area (DMA)
- Meter Replacement Program
- Replacement of old and ageing pipes and pumps
- Installation of Master Meters at DMAs
- Automation of systems (GIS, SCADA, etc.)
- Introduction of Water Modelling Software tool.
- Installation of Water Pressure Reducing Valves
- Installation of air valves
- Technical expertise assistance from Fukuoka City, Japan via JICA
- Enhancement of Leak Detection Unit operations.

### ***Achievements***

- Non-revenue water has been decreasing, hence, improved infrastructures and increased revenue due to continual water supply at 24 hours

## **WATER SUPPLY SERVICE STANDARDS**

### ***Current Situation and Major Challenges/problems***

- Currently there is no service standard in place for the water supply sector as after the reform of the Department of Water & Sewerage. The Water Act 1955 and Sewerage Act 1985 were repealed in 2007 through the Water Authority of Fiji Promulgation Act.

### ***Current actions against Problems***

- The Department of Water & Sewerage is in the process of conducting a review on the Water and Sewerage legislation that will enable it to draw up a service standard for the water supply sector.

### ***Achievements***

- The review of the legislation and establishment of the new will enable the Department of Water and Sewerage to regulate water and sewerage services effectively in the country

# MANAGEMENT OF WATER SUPPLY SERVICE ON A SELF-SUPPORTING BASIS

## 1. Current Situation and Major Challenges/problems

- The Water Authority of Fiji is not on a self-supporting platform as the organization still relies on Government to provide funding.
- The challenges that are faced are:
  - i. lack of funding for infrastructure renewals and replacement
  - ii. past under-investment in infrastructure renewals and maintenance
  - iii. water prices set below sustainable levels (do not support full lifecycle cost recovery)
  - iv. lack of reliable funding sources
  - v. dependence upon ad hoc government funding

## Current actions against Problems

- An increase in Government funding in the water sector as per budget allocation this year, 2015, giving an amount of \$63,156,600 for operation and \$176,064,900 for capital expenditures

## MAJOR RECENT ACHIEVEMENT IN IMPROVEMENT OF WATER SUPPLY SERVICES/MANAGEMENT

| URBAN                               | 2010                                                                                        | 2011                                                                         | 2012                                                                                                        | 2013                                                                                       | 2014                                                                                                                                                                        |
|-------------------------------------|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Water Supply and Wastewater Systems | Reservoir Upgrade – Tovata, Wainibuku, Upper Tacina & Tamavua \$1M                          | Upgrade of Waila and Tamavua Water Treatment \$23M                           | Rehabilitation of the Kinoya Sewerage Treatment Plant €3,045,036.48+ FJS\$1.8M                              | Installation of new five standby generators. Units cost between \$200,000 - \$600,000 each | Meter verification and replacement program \$5.8M                                                                                                                           |
|                                     | Navau to Benau Pipe Laying and Construction of Break Pressure Tank \$8M                     | Laying of 375mm/300mm/150 mm Pipes from QVS to RKS \$3.4M                    | CCTV Sewer Inspection for Suva/Nausori Sewer. \$4M                                                          | New pipes laid at Vaturu Dam. \$900,000.00                                                 | Taking over the Balevuto Water Supply project as a result of government intervention after an outbreak of hepatitis A and leptospirosis which affected 400 families. \$1.2M |
|                                     | Laying of 4Km of 375mm diameter pipe at Denarau - \$450,000.00                              | 600mmduplicate main from Waimalika Junction to Sabeto Junction. Cost = \$8m. | Commission of the new Valele Reservoir which benefited 8,000 people living along Nailaga – Sarava corridor. |                                                                                            |                                                                                                                                                                             |

HONDURAS

# Water Supply Administration for Better Management of Water Supply Services

## Country Report Outline Format

**1. Country: Honduras**

**2. Name: Marco Antonio Moreno**

**3. Position: Project Coordinator**

**4. Organization: SANAA**

## Country Report Presentation

• **6 topics:**

- 1. Management of water quality
- 2. Reduction of non-revenue water
- 3. Water supply service standards
- 4. Management of water supply service on a self-supporting basis
- 5. Major recent achievement in improvement of water supply services/management
- 6. Expectation for the Japanese private companies

• **6 topics include** “Current situation and major problems, Current actions against the problems and any achievement, etc.”

## General Country profile:

## General Country profile: Background

- Honduras is a republic in Central America. The country is bordered to the west by Guatemala, to the southwest by El Salvador, to the southeast by Nicaragua, to the south by the Pacific Ocean at the Gulf of Fonseca, and to the north by the Gulf of Honduras.

### Whole Country:

Area : 112.492,0 km<sup>2</sup>

Population : 8.894.975 Habitants

Coverage Water Supply: 95 (goal in 2015) %

### Selected Water Supply System/City:

Service Area : 201.5 km<sup>2</sup>

Population Served: 1.2 million

## My Mission

- Mission of my organization is:

Being experts infrastructure providers and water and sanitation services in urban and rural areas of Honduras.

Efficiently use available resources, in close cooperation with the institutions of the water sector in order to contribute to the welfare and development of the Honduran people.

- My mission in the organization is:

Conceptualize, develop studies and coordinate the implementation of projects that promote access to drinking water and infrastructure to ensure proper treatment and disposal of domestic wastewater.

- My actual job to achieve the mission is:

Coordinate projects of drinking water, treatment and disposal of domestic wastewater and use of water for hydropower generation. SANAA Coordinator by the execution of "Micro-Hydroelectric Power Generation Project in Metropolitan Area of Tegucigalpa, currently under construction and financed by JICA.

## 1. Management of water quality

- The management of water quality in the metropolitan aqueduct of Tegucigalpa is based on the fulfillment of the Technical Standard for Drinking Water Quality of Honduras and fulfillment of plans to preserving water quality standards in pre-phase supply in homes.

## 1. Management of water quality

- The management of water quality in the metropolitan aqueduct of Tegucigalpa is based on the fulfillment of the Technical Standard for Drinking Water Quality of Honduras.

## 1. Management of water quality

- Institutional Framework related:

CONASA

- Policies
- Planning
- Sector coordination

ERSAPS

- Regulation and
- Control

SANAA

- Technical Secretary of CONASA
- Technical Entity
- SANAA also operates the water distribution system of Tegucigalpa.

Municipalities and  
Water Concils

- Holders of drinking water service

# 1. Management of water quality

## Current situation of drinking water service capacity

| DESCRIPTION                     | VALUE                              |
|---------------------------------|------------------------------------|
| Tegucigalpa's population (2013) | 1,210,830 hab. (500 neighborhoods) |
| Served population               | 800,000 hab (66%)                  |
| Media required production       | 308,500 m <sup>3</sup> /d          |
| Service capacity                | 258,509 m <sup>3</sup> /d          |
| Deficiency                      | 49,991 m <sup>3</sup> /d           |
| Number of connections           | 118,548 clients                    |

# 1. Management of water quality

## Current situation and major challenges/problems:

1. Deficit in drinking water installed capacity, about 17%.
2. Continuity of service water supply is very low, rationed 4-6 hour/day average.
3. The pipe distribution network has many years of service, remains empty for long, caused by low continuity of service or with very low pressure, which produce income contaminated groundwater.

| Periodo: |                                            | Viernes 16 al Sabado 31 de Mayo de |    |    |    |    |    |    |    |    |    |    |    |    |    |

## 1. Management of water quality

### ❁ Current situation and major challenges/problems:

4. High degradation of watersheds, in the rainy season, the water increased turbidity, resulting in increased use of chemicals for water treatment and produces difficulties in maintaining operating the aqueduct because of the high production costs.

## 1. Management of water quality

### ❁ Current situation and major challenges/problems:

5. It is necessary to implement a monitoring network and effective monitoring of water quality.

# 1. Management of water quality

## • Current actions against the problems and any achievement:

1. Interventionism pilot projects in watersheds (reforestation).
2. Weekly water analysis.
3. Construction project, inter-basin water transfer.

# 2. Reduction of non-revenue water<sup>1</sup>

## • Constitution of Non-revenue Water (If you have the data, please fill in the table )

|                           |                           |                                  |                                                                                                                            |                                                 |

## 2. Reduction of non-revenue water

- ❁ We need a program to reduction of non-revenue water.

- ❁ Low rate of micro measurement.
- ❁ Low rate effective measurement in distribution centers (main tanks).
- ❁ Low segmentation of the distribution network.
- ❁ No defined and controlled hydraulic circuits.
- ❁ Without pressure control in distribution networks.

## 3. Water Tariff

| CATEGORY                                       | RANGE<br>M3/MONTH | Minimum water<br>consumption per<br>segment L/Month | rate L. M3/Month | Fixed cost per<br>connection<br>L/Month | Approximate value per month |          |

| T.S.D.W.Q. of Hnd | Water quality            | T.S.D.W.Q. of Hnd. |
| -%                | Coverage area            | 66%                |
| 7 hr/d            | Supply duration          | 5 hr/d             |
| - bar             | Supply pressure          | 2.5 bars           |
| -                 | Number of connections    | 118,548            |
| 40%               | NRW                      | ≈ 40%              |
| -%                | Collection ratio         | 79%                |
| 1,200             | Staff number             | 1,680              |

## 6. Major recent achievement in improvement of water supply services/management (PART 2)

- Final design studies of a new dam.
- Updating drawings distribution networks.
- Construction of two micro hydroelectric power generation to reduce operating costs.

## 7. Expectation for the Japanese private companies & Water Supply Utilities

- ❁ Learn how to prepare water safety plans
- ❁ Learn about management models that allowing Japanese companies to have appropriate services indicators.
- ❁ Learn about structural and nonstructural actions to get reduce the non-revenue water.
- ❁ Learn how to create a effective network of quality monitoring water, self-sustaining.

IRAQ

# Water Supply Administration for Better Management of Water Supply Services

## Country Report Outline Format

1. **Country:** IRAQ – Kurdistan region
2. **Name:** Bakhtyar Taher Raouf and bayar taqeadeen qader
3. **Position:** Directors
4. **Organization:** sulaimanyah surrounding water directorate

## General Country profile: Background

### Whole Country:

Area : 384520 km<sup>2</sup>

Population : 5450000 Habitants

Coverage Water Supply: 90 %

Kurdistan region area are including land . Mountain landscape area and we have two main river Furat and degla which are the main surface water source of our water supply system .

## My Mission

- ✿ Mission of my organization is to supply clean water to district – sub district and villages we depend in our project on government fund ,some time(N.G.O)or in international loan can fund our project
- ✿ our mission in the organization is to get the water network for all town and villages and operate the water projects.
- ✿ our actual job to achieve the mission is managing the director in the best way to bring the best water quality for the citizen.

## 1. Management of water quality

- ✿ We have the quality control department in our directorate and they manage the water quality daily by making test for water quality by biological and chemical tests. With separate water monitoring by ministry of health .

## 2. Reduction of non-revenue water<sup>1</sup>

- Constitution of Non-revenue Water (If you have the data, please fill in the table )

|                     |                        |                             |                                                                                                 |                              |
|---------------------|------------------------|-----------------------------|-------------------------------------------------------------------------------------------------|------------------------------|
| System input volume | Authorized consumption | Revenue water               | Billed authorized consumption                                                                   | xx m <sup>3</sup> /year ( %) |
|                     | 80%                    | Non Revenue Water (NRW) 80% | Unbilled authorized consumption (ex. fire fighting, cleaning)                                   | xx m <sup>3</sup> /year ( %) |
|                     | Water losses           |                             | Apparent losses ( Unauthorized consumption (i.e. Illegal use), Customer metering inaccuracies ) | xx m <sup>3</sup> /year ( %) |
|                     | 50%                    |                             | Real losses (Leakage)                                                                           | xx m <sup>3</sup> /year ( %) |

## 3. Water Tariff

- Now project of instillation of meters under constriction
- We have constant for each houses 5000 ID which is =4 \$

#### **4. Water supply service standards /Performance Indicators**

- our Water supply service standards depends on the number of population and water sources and deep wells .

We are working on WHO standards

#### **5. Management of water supply service on a self-supporting basis**

- Coaching pasting ads and distributing ads on citizens for decreasing water waste .
- We have ordinary staff which are managing water serves in rural and urban area our government support us in our organization .

## 6. Major recent achievement in improvement of water supply services/management (PART1)

| 2003or2004?    | INDICATORS               | 2013or2014     |
|----------------|--------------------------|----------------|
| 22             | Staff/1,000 connections  | 3.2            |
| 50,000         | Production capacity m3/d | 250,000        |
| WHO Guidelines | Water quality            | WHO Guidelines |
| 55%            | Coverage area            | 80%            |
| 2hr/d          | Supply duration          | 6hr/d          |
| 1.0 bar        | Supply pressure          | 2.0 bars       |
| 60,000         | Number of connections    | 178,155        |
| 30%            | Collection ratio         | 80%            |
| 1,000          | Staff number             | 3379           |

## 6. Major recent achievement in improvement of water supply services/management (PART2)

- Installing meters for house hold connection and warking on water low in Kurdistan parlament

## **7. Expectation for the Japanese private companies & Water Supply Utilities**

**our Expectation for the Japanese private companies is to help us in our projects to make the water networks and water quality better and to have lasts information about water field such as (pipes- software programs to analyze water network-new technology in water project.**

*Water Supply Administration*  
*For Better Management of Water Supply Services*  
Course ( A )

JORDAN

# WATER SUPPLY ADMINISTRATION FOR BETTER MANAGEMENT OF WATER SUPPLY SERVICES

**Country: Jordan**

**Name: Mohammed Hossam Sallam**

**Position: NRW Director**

**Organization: Water Authority of Jordan**

## JORDAN

### ✕ Whole Country:

- ✕ Area : 89342 km<sup>2</sup>
- ✕ Population : 6.5 m Habitants
- ✕ Coverage Water Supply: 97 %

### ✕ Selected Water Supply System/City:

- ✕ Service Area :less than 89342 km<sup>2</sup>
- ✕ Population Served: 8 million

## **MANAGEMENT OF WATER QUALITY**

Directorate of Central laboratories of WAJ is responsible to implement random sampling of drinking water all over Jordan, the analysis results shown a conformity of drinking water quality (bacterial) with a ratio of (99.4%),

## **REDUCTION OF NON-REVENUE WATER**

- ✖ The NRW rate is around 49%, the major challenge we are facing is the influx of refugees from the surrounding countries, which adds to our already bad situation, emergency plans have been executed in most of Kingdom's governorates to ensure speedy supply of water to more than 1.5m refugees scattered all over the Kingdom which meant extension of networks ,additional quantities of water to be supplied in a strict rationing regime adding to NRW figures .

## **WATER SUPPLY SERVICE STANDARDS**

Water supply services in Jordan is already covering 97% of the population, challenge facing this issue of high rate of supply coverage is the gap between demand and available supply in light of the scarcity of resources, and the distance of water sources from demand centers, which implicate high cost of energy per cubic meter.

## **MANAGEMENT OF WATER SUPPLY SERVICE ON A SELF-SUPPORTING BASIS**

Management of water supply services is faced by scarcity of resources and the ever increasing demand for water due to population growth and the requirements of development and the successive migrations caused by the political situation in the region .

# MAJOR RECENT ACHIEVEMENT IN IMPROVEMENT OF WATER SUPPLY SERVICES/MANAGEMENT

Fresh water resources are being directed only to serve drinking purposes, reclaimed water from treatment plants is being used for agriculture in Jordan , new Resources of Disi carrier, Red-Dead - and water harvesting are on track already

▪

## Challenges Facing Water Sector

1. Exacerbate the gap between demand and available in light of the scarcity of resources and the increasing demand for water due to population growth and the requirements of development and the successive migrations caused by the political situation in the region to the Kingdom of
2. Distance of water sources from demand centers which implicate high cost of investment in developing storing , and distribution of water ,in addition to high cost of pumping to high elevations.
3. Depletion of aquifers as a result of over pumping to meet the immediate needs of the citizens
4. Limited sources of funding required for the implementation of new projects and rehabilitate existing ones
5. Diminishing water resources as a result of increased cross-border exploitation before they enter the territory of the Kingdom
- 6. Challenges of the water sector to face the successive migrations of refugees**
- 7. Challenges of climate change and global warming**

## **The Negative Effects of Water Deficit**

**Social effects:** as the lack of water supplied for domestic use may lead to the spread of diseases and epidemics, which increases the burden on the health bill for treatment and the negative repercussions of the national output.

**2) the economic effects:** as the water deficit leads to the inability to achieve the desired levels of development of development plans laid down by the government, which will reflect negatively on the social and economic growth in the Kingdom.

10

## **WATER SUPPLY SERVICE STANDARDS /PERFORMANCE INDICATORS**

- ✖ The already used P.I at present is %NRW although this indicator should linked with other P.I such as NRW/sub ,or /house connection . And finally ILI. This is being worked at for this year 2015.

## MY MISSION

- ✖ Mission of my organization is to produce , treat ,and distribute good quality safe water in the distribution networks and, to collect and treat waste water.
- ✖ My mission in the organization is to launch a program of NRW in governorates.
- ✖ My actual job to achieve the mission is to reduce NRW and to make available more quantities of water.

11

## WATER TARIFF

- ✖ Water tariff in Jordan per m<sup>3</sup> is split in to categories , starting at low price per cubic meter of less than 0.2 JD for the first 18 cubic meters per quarter (3months) and going all the way to 1.6 JD for the category of more than 127 cubic meter per quarter .

*Water Supply Administration*  
*For Better Management of Water Supply Services*  
Course ( A )

MALAWI

# Water Supply Administration for Better Management of Water Supply Services

## Country Report

**Country: MALAWI**

**Name: LETTON EPHRAIM CHILONGO**

**Position: PLANNING MANAGER**

**Organization: NORTHERN REGION WATER BOARD**

## General Country profile:Background

### Geographic Location:

- Malawi is a landlocked country in South East Africa. It is bordered by Zambia to the northwest, Tanzania to the northeast and Mozambique to the east, south and west.

### Economy

- Malawi is among the least developed countries in the world with a per capita nominal GDP of less than USD253 (2012 ). The economy is heavily dependent on agriculture which accounts for 35% of GDP. Industry accounts for 19% and services for the remaining 49%. Main agriculture products are tobacco, sugarcane, cotton, tea, corn, potatoes, sorghum, cattle and goats.

### Whole Country:

Area : 118,000 km<sup>2</sup>

Population : 16,800,000 Habitants

Coverage Water Supply: 78 %

### Selected Water Supply System – Northern Region Water Board:

Service Area : 210 km<sup>2</sup>

Population Served: 278,000

## My Mission

### ❁ Mission of my organization is:

To supply potable water to the urban and peri-urban centers of Northern Region of Malawi.

### ❁ My mission in the organization is:

Management of planning activities for water supply in the Board's statutory area.

### ❁ My actual job to achieve the mission is:

1. Initiating and carrying out the Board's water supply development plans
2. Managing and conducting feasibility and design processes of the Board's projects to improve water supply services.
3. Working with consultants on feasibility studies for developmental projects
4. Coordinating the Board's performance monitoring activities

## 1. Management of water quality

### Current situation/ challenges

- ❁ Water quality management unit existing within NRW with 6No permanent staff.
- ❁ Water quality deteriorating in all surface sources due to environmental degradation and climate change factors
- ❁ Resulted into high usage of chemicals, rising treatment cost, rising plant investment costs
- ❁ Lack of suitable equipment and laboratories for carrying out tests

### Planned action

- ❁ Comprehensive catchment/water source management programs
- ❁ Establishment of partnerships for integrated catchment management
- ❁ Comprehensive monitoring systems and safety plans

### Achievements

- ❁ Partnerships with Forestry Department, Army and Councils
- ❁ Annual re-afforestation programs in protected catchments
- ❁ Regular monitoring system in place
- ❁ Collaboration with other laboratories, Universities for tests

## 2. Reduction of non-revenue water1

### ❖ Constitution of Non-revenue Water –

Note: Data not sufficient since water balance is not carried out

|                                     |                                       |                            |                                                                                                                    |                                 |

| System input volume<br>(10,600,000) | Authorized consumption<br>(7,200,000) | Revenue water              | Billed authorized consumption                                                                                      | xx m <sup>3</sup> /year<br>( %) |
|                                     |                                       | Non Revenue Water<br>(NRW) | Unbilled authorized consumption<br>(ex. fire fighting, cleaning)                                                   | xx m <sup>3</sup> /year<br>( %) |
|                                     | Water losses<br>(3,400,000)           |                            | <b>Apparent losses<br/>( Unauthorized consumption<br/>(i.e. Illegal use),<br/>Customer metering inaccuracies )</b> | xx m <sup>3</sup> /year<br>( %) |
|                                     |                                       |                            | <b>Real losses<br/>(Leakage)</b>                                                                                   | xx m <sup>3</sup> /year<br>( %) |

## 2. Reduction of non-revenue water2

### Current Situation

- ❖ NRW is high at around 36% for the Board
- ❖ Water Balance not carried out, only pilot project in one scheme Karonga Town.
- ❖ Biggest scheme Mzuzu City NRW at 40%
- ❖ NRW reduction Unit still under establishment, efforts to reduce NRW being done by individual schemes

### Strategies and Action

- ❖ Establishment of a NRW reduction Unit to coordinate NRW reduction
- ❖ Rezoning schemes into DMAs
- ❖ Meter replacement and management program
- ❖ Rehabilitation of old distribution networks
- ❖ Implement Water Balance in all schemes

### Achievements in NRW reduction

- ❖ Setting up of the NRW reduction unit and recruitment of staff
- ❖ Implementation of Water Demand Management (WDM) project in Mzuzu city (biggest scheme) to focus on establishment of DMAs and NRW reduction
- ❖ Karonga scheme pilot Water balance model

### 3. Water Tariff

#### Current Situation

- Water tariff is set by the organization NRWB but subject to approval by the Government
- Tariff has 4 major categories; commercials, institutions, domestic individuals and low income Communal water points (CWP's).
- Tariff setup subsidizes for low income communities
- Tariff provide for full cost recovery and minimal profit margins as governed by Government policy.

#### Challenges

- Bureaucracy delays timely implementation of tariff changes
- Political factors play part in course of getting approval from Government
- Untimely bill payment by some Government institutions like Army and Police who are major customers results into cash flow problems and accumulation of debtors

#### Strategies

- Planning for automatic tariff adjustment system
- Proposal to have an independent regulator for water utilities
- Implementation of prepaid metering system to improve cash flow

### 4. Water supply service standards /Performance Indicators

#### Current situation

- 79% supply coverage in designated NRWB supply areas
- 18 hours/day average supply time due to power outages and inadequate raw water sources
- Monthly, quarterly and annual performance monitoring in place

#### Challenges

- Unreliable power supply main challenge in all schemes
- Old dilapidating distribution networks that require rehabilitation
- Inadequate raw water sources in some of the schemes
- Challenges to source funding for investment projects to improve supply standards

#### Plans, Strategies and actions

- Plans to pilot alternative energy supply like solar and wind
- Design and construction of new dams as additional raw water sources in some of the schemes facing raw water sources inadequacies
- Rehabilitation and upgrading supply networks
- Collaborating with development partners to source funding

## 5. Management of water supply service on a self-supporting basis

### Current situation

- Current tariffs provides for NRW to run on a self supporting basis but there are cash flow problems due to delays in approving adjustments, and failure of major institutions to honor their bills on time.
- There is no subsidy from the Government for operations of the Board but the Government facilitates investment loans and access to grants from banks and developing partners.
- The Board conducts regular cash collection campaigns and negotiations to improve cash flow.

### Actions to address challenges/problems

- Implementation of prepaid metering system to improve cash flow
- Establishment of debt collection unit in all schemes to coordinate cash collection activities
- Regular cash collection campaigns conducted in all schemes
- Need for an independent regulator for water utilities

## 6. Major recent achievement in improvement of water supply services/management (PART1)

(NRWB)

| 2007           | INDICATORS               | 2014           |
|----------------|--------------------------|----------------|
| 14             | Staff/1,000 connections  | 10             |
| 20,000         | Production capacity m3/d | 29,000         |
| WHO Guidelines | Water quality            | WHO Guidelines |
| 62%            | Coverage area            | 79%            |
| 18hr/d         | Supply duration          | 18hr/d         |
| 1.5 bar        | Supply pressure          | 2.0 bars       |
| 18000          | Number of connections    | 36000          |
| 40%            | NRW                      | 36%            |
| 65%            | Collection ratio         | 75%            |
| 250            | Staff number             | 330            |

## 6. Major recent achievement in improvement of water supply services/management (PART2)

- ❁ Rehabilitation and upgrading of treatment, transmission and distribution systems in some of schemes like Mzuzu city
- ❁ Introduction of prepaid metering system in major schemes of Mzuzu and Karonga in 2013
- ❁ Twinning program with sister water companies in RSA, Lesotho and Zambia that have staff exchange programs
- ❁ Implementation of online bill payment system in all schemes
- ❁ Piloting online monitoring of storage tanks levels in Mzuzu

## 7. Expectation for the Japanese private companies & Water Supply Utilities

- ❁ Water quality management: Japan is a leading manufacturer of electronic instruments. I expect Japanese water companies to have advanced water quality monitoring technologies and measuring equipment/instruments as well as techniques that can be adopted by our organization (NRWB).
- ❁ Non revenue water reduction: I expect Japanese water companies to have very low levels of NRW and that they carry out full water balance performance monitoring. This will be an opportunity to learn from their experiences, approaches as well as techniques and equipment on how best to reduce non revenue water in the set up of our organization (NRWB).
- ❁ Water supply service standards: Since Japanese cities are big, advanced and highly industrialized I expect to gain knowledge in supply service planning, water demand management, pressure management, quality control and performance monitoring.
- ❁ Self supporting management and tariffs: I expect to learn from existing policy and regulation in the Japanese water industry. How Japanese water utilities set up tariffs and how they plan and finance investments.
- ❁ Water Safety: To learn on how water safety plans are implemented in Japan and adopt similar water safety plan for NRW.

NIGERIA

# WATER SUPPLY ADMINISTRATION FOR BETTER MANAGEMENT OF WATER SUPPLY SERVICES COUNTRY REPORT

1. Country: Nigeria (FCT)
2. Names: (a) Mallam Hudu Bello  
&  
(b) Mrs. Ololade Y. Okobi
3. Positions: (a) Director  
&  
(b) Asst. Director (Quality Control)
4. Organization: FCT Water Board

1

## GENERAL COUNTRY PROFILE: BACKGROUND

The Nigerian Flag, officially adopted on October 1, 1960, consists of three vertical bands of green, white and green.

Official Name Nigeria  
Continent : Africa  
Lat Long 7.6219° N, 6.9743° E  
Capital : Abuja  
Largest City Lagos  
Official Language : [English](#)  
Major Religion : Christianity 50.80% Islam 48.80% Others 0.40%  
National day 1 October (1960)  
Form of Government Federal presidential republic  
President Goodluck Ebele Jonathan  
Vice President Namadi Sambo  
Currency Nigerian naira  
GDP \$522.180 billion 2014 estimate  
Area Covered : 923,768 KM<sup>2</sup>  
Population : 162,470,737

2

## MISSION

- The Mission of my organization is to provide water of adequate quantity and quality at an equitable rate to the residents of FCT.
- My mission in the organization is to harmonize and direct all resources ( human, capital, machinery etc) to achieve the objective of providing safe water supply and quality service to the residents of the FCT and also ensure optimum revenue generation for the organization.
- My actual job to achieve the mission is directing and managing the entire daily operations of the organization.

3

## 1. MANAGEMENT OF WATER QUALITY

- This is being improved nationally. The Federal Ministry of water Resources is currently the regulatory agency for national water quality monitoring. The Ministry has 6 functional regional laboratories located across the 6 geo political zones of the country.
- A national Drinking Water Standard has been developed in collaboration with the Standards Organization of Nigeria (SON)
- The FCTWB monitors water from the catchment area through the treatment stage to the consumer point on a regular basis.
- Attend to customer's complaint promptly

5

## 2. REDUCTION OF NON-REVENUE WATER<sup>1</sup>

- ✿ The available data for non –revenue water is from a study conducted in 2007 as outlined below. The study puts the percentage of non revenue water at 66%

|                            |                                                 |                                               |                                                              |                                          |

|                            |                                                 |                                               | Billed Un-metered Consumption<br>(35,562.34)                 |                                          |
|                            |                                                 | Unbilled Authorised Consumption<br>(1,727.86) | Unbilled Metered Consumption<br>(190.06)                     | Non-revenue Water (95,327.86)<br><br>66% |
|                            | Unauthorised Consumption<br>(93,600)<br><br>64% | Apparent Losses (56,160)                      | Unbilled Un-metered Consumption<br>(1,537.79)                |                                          |
|                            |                                                 |                                               | Unauthorised Consumption (30,888)                            |                                          |
|                            |                                                 | Real Losses (37,440)                          | Meter and Estimation Inaccuracies<br>(25,272)                |                                          |
|                            |                                                 |                                               | Leakage on Transmission and Distribution mains (12,355.20)   |                                          |
|                            |                                                 |                                               | Leakage and Overflows at Storage Tanks<br>(8,236.80)         |                                          |
|                            |                                                 |                                               | Leakage on Service Connections up to Metering Point (16,848) |                                          |

6

## 2. REDUCTION OF NON-REVENUE WATER<sup>2</sup>

- There is a dearth of data because of lack of infrastructure and adequate training on management of non – revenue water (eg zonal meters, aging GI pipes etc).
- Effort is been made in collaboration with JICA on NRW for the Board.
- A Smart Metering programme is also about to commence in the WB

7

## 3. WATER TARIFF

- The Water Board has a mandate to charge an equitable rate for water supply. The tariff structure is differentiated as domestic and commercial. Tariff is set and reviewed periodically after due consultation with relevant stake holders, supervised by an independent body, the Utilities Charges Commission. Final approval is given by the Honourable Minister of FCT.
- It is inconclusive if the current tariff is commensurate with cost of production

8

## **4. WATER SUPPLY SERVICE STANDARDS /PERFORMANCE**

### **INDICATORS**

- ✿ FCTWB strives to comply with the international best practice in water supply standards. Some of the indicators we have set for ourselves are as follows:
  - Volume of water treated
  - Optimizing power use
  - Total population served
  - Hours of available water supply
  - Network leakage
  - Volume of water distributed
  - Continuity of service
  - Number of water quality complaints received per month and per year etc.
  - Maintenance of plant and equipment
  - Optimizing chemical use
  - Water treatment plant capacity utilization

## **5. MANAGEMENT OF WATER SUPPLY SERVICE ON A SELF-SUPPORTING BASIS**

- ✿ The current situation of the management of water supply services in the FCT is that the infrastructure is provided by the Engineering Department of the Federal Capital Development Agency (FCDA), an arm of the FCTA while the FCTWB is responsible for daily operation and maintenance of the plants, appurtenances and other infrastructure

## 6. MAJOR RECENT ACHIEVEMENT IN IMPROVEMENT OF WATER SUPPLY SERVICES/MANAGEMENT (PART1)

| 2004                     | INDICATORS                            | 2014                     |
|--------------------------|---------------------------------------|--------------------------|
| 22                       | Staff/1,000 connections               | 3.2                      |
| 480,000m <sup>3</sup> /d | Production capacity m <sup>3</sup> /d | 720,000m <sup>3</sup> /d |
| WHO                      | Water quality                         | WHO Guidelines           |
| 50%                      | Coverage area                         | 70%                      |
| *24hr/d                  | Supply duration                       | *24hr/d                  |
| 4 bars                   | Supply pressure                       | 3.5 bars                 |
| 26,881                   | Number of connections                 | 191,092                  |
| *65%                     | NRW                                   | * 60%                    |
| 48%                      | Collection ratio                      | 52.9%                    |
| 1,650                    | Staff number                          | 824                      |

11

## 6. MAJOR RECENT ACHIEVEMENT IN IMPROVEMENT OF WATER SUPPLY SERVICES/MANAGEMENT (PART2)

- Advanced metering systems (AMR & Smart Meter)
- Zonal Bulk metering
- Collaboration with JICA on reduction of NRW
- Improvement in Maintenance of leakages (surface)
- Completion and Commissioning of 3<sup>rd</sup> & 4<sup>th</sup> Treatment Plants

12

## **7. EXPECTATION FOR THE JAPANESE PRIVATE COMPANIES & WATER SUPPLY UTILITIES**

- ✿ Supply of innovative water supply technology
- ✿ Exchange of ideas on best practices
- ✿ Capacity development
- ✿ Knowledge of leakage devices

*Water Supply Administration*

Course ( A )

# SOUTH SUDAN

# Water Supply Administration for Better Management of Water Supply Services

## INCEPTION REPORT:

**Country:** REPUBLIC OF SOUTH SUDAN.

**NAME:** NANCY ELUZAI MANASSHE

**POSITION:** Assistant Engineer water Distribution

**ORGANISATION:** South Sudan Urban Water Corporation/Juba Station

TOKYO Japan- May 17- 30 2015

## Juba water supply Station

- **Area:** not determined
- **Service area:** 72km length
- **Population:** Above one(1) million.
- **Population served:** 1,900 plus.
- **Water supply coverage:**15%

## Juba Water Distri.system

## Management statistics

- **Non revenue water(NRW):**40%.
- **Leakage ratio:** very high.
- **Daily supply:**

**6,000 m<sup>3</sup>/day** when city power is available.

**3,500 m<sup>3</sup>/** using old inefficient standby Gens,above  
14hrs/24 operation.

Average water rate: 2USD/m<sup>3</sup>.

Water Tariff collection:30%

# Organization of Juba Station

## *Intake Mains*

Two centrifugal pumps  
capacity : 158 cubic  
meter per hour

Three pumps ,two  
operational, one  
standby.

# Monitoring operation.

## Juba Water treatment plant

Juba water treatment plant was constructed in 2006 and commissioned in 2009.

Capacity: 7,200 m<sup>3</sup>/ day.

### **System component.**

Intake, Raw water pumps, raw water tank Alum dosing unit, Coagulation, baffles, sed., Filtration HOCL disinfection unit & clear water tanks

## Experiment to produce cleaner water (Filter backwash test)

### Filter backwash

Some time after filtration of settled water, filter becomes stacked with dirty materials, and filter has to be washed to restore its function

#### Old method:

Air blower: 3 minutes

Water backwashing: 4~5 minutes

Frequency: 2~3 times/filter/day

#### New method

: 5 minutes

: 10 minutes

: 1 times

## High lift Pumps

Three centrifugal pumps.

Capacity: 150 cubic meters per hour

Two operational, one standby.

# Water Quality Management Plan (Monthly Test)

Sampling locations:

- ☐ taps and tanks
- ☐ Household taps

## Water supply system/Juba

A tanker Filling station & public tap stand –Two km from the water treatment plant.

## Leak repair Activity.

## 1-2. Specification of transmission and distribution system

- Transmission and distribution pipeline

| Material                 | Length (m) | %    |
|--------------------------|------------|------|
| Asbestos cement (AC)     | 49,041     | 69%  |
| Galvanized iron (GI)     | 1,295      | 2%   |
| Polyvinyl chloride (PVC) | 16,403     | 23%  |
| Steel (ST)               | 4,575      | 6%   |
| Total (m)                | 71,314     | 100% |

## Distribution Network

91Km long,  
71Km, Dilapidated  
Mainly GI and Asbestos.  
Distribution reservoirs:  
1 Elevated Booster substation,  
Two gravity 250 m3 capacity.  
One ground distribution tank.

Japanese peace planning to assist ssuwc by ex

## Challenges:

- ❖ Inadequate funds to meet operational cost.
- ❖ Spare parts not available.
- ❖ Some customers don't pay bills (mostly gov't institutions and VIPs).
- ❖ WTP capacity is small (7,200 m<sup>3</sup>/day) compared to demand,
- ❖ Dilapidated or Damaged distribution network.
- ❖ High rate of NRW (Illegal connection, leakage & bill payment.
- ❖ power supply is a problem.
- ❖ Lack of fuel.
- ❖ No excavator.
- ❖ HR.
- ❖ Malfunction of the Billing section PCs (No internet to keep Antivirus updated).

## Efficient water supply

- Construction of new water supply facilities/200,000 m<sup>3</sup>.
- Replacement of the damaged existing distri. network
- Implementation of the grant aid (JICA) project.
- Procure water quality equipments.
- Recruit professional HR.
- Distribution management plan (leakage repairs Installation of meters & GIS mapping).
- Customer care & education programs.
- Avail stock (fittings, Gen, vehicles, electric, pump parts fuel)
-

# JICA grant aid Project

## The Project for Improvement of Water Supply System in Juba

- Under implementation
- Funded by Japanese Government
- Capacity 10,800 m<sup>3</sup>
- length 37 km
- Contracted: by Dai Nippon Construction (DNC)

SUDAN

## Country Report

# Group Training (Leaders Training) Water Supply Administration for Better Management of Water Supply Services (A)

Name: Mohamed Abdelgadir Mahdi

E-Mail: [mohgadir@hotmail.com](mailto:mohgadir@hotmail.com)

Country: Republic of Sudan

Organization: Hawata Wad-Elageili Water Corporation

## **General Information**

- Sudan is the second country in Africa according to the area (1,865,813) square kilometer.
- The total population of Sudan is (30,894,000) census 2008.
- Shares its borders with Egypt to the north, the Red Sea to the north east, Eritrea and Ethiopia to the east, South Sudan to the south, the Central African Republic to the south west, Chad to the west and Libya to the north west.
- Khartoum is the political capital.
- The form of government is federal presidential republic.
- Major religion is Islam ( 96.7) %, small Christianity minority.
- Official languages are Arabic and English .
- National day on first of January each year (1956).
- National currency is the Sudanese pound (SDG).

## **Sudan Economy:**

- ❖ About (80)% of the population depend on Agriculture (Cotton, Ground Nuts, Peanuts, Sorghum, Millet, Wheat, Gum Arabic, Sugar Cane, Potatoes, Sesame, Livestock).
- ❖ Some (10)% of the population depend on Forestry Production.
- ❖ About (7)% of the population depend on Industries (Oil, Cotton Ginning, Textiles, Cement, Edible Oils, Sugar, Soap Distilling, Shoes, Petroleum Refining, Pharmaceuticals, Armaments, Automobile, Light Truck Assembly).

## **1.Organizational profile:**

- 1.1 The name of my organization is Hawata Wad-Elageili Water Corporation.
- 1.2 It works to supply the beneficiaries with potable drinking water.
- 1.3 It is a local public corporation works in parts of tow states (Gedarif and Sennar).
- 1.4 I am the Director General of this corporation and responsible for good administration ,finance budgeting, operation & maintenance and procurement and replacement of the whole units.

## **Organizational Management**

- The administration of Hawata W.C. based on sharing bases between the beneficiaries(Board of Directors) and the executive administration of H.W.C. without political interference.
- Departments managers carry over their responsibilities with full authority.
- Village water man is responsible to call for any breakdown to the system within his vicinity.
- Decisions usually taken in group discussion.
- Water man and kiosk operator is the choice of the village committee leaders.
- Hawata W.C. has an information sharing system.

## **2. Water Resources:**

### **2.1 The geographical background of Sudan:**

- The total area of forestry come to about 10% of the whole area of Sudan.
- The Nile is the dominant feature of Sudan, flowing (3000) kilometers from Uganda in the south to Egypt in the north.
- The Blue Nile and the White Nile originating in the Ethiopian high lands and the Central African lakes, respectively.
- Other Nile tributaries are the Atbara, Dinder and Rahad rivers.

## **2.2 Annual Precipitation**

| <b>Town</b>       | <b>Annual Precipitation(mm)</b> | <b>State</b>  |
|-------------------|---------------------------------|---------------|
| Karima            | 20.7                            | Northern      |
| Hudeiba           | 39.4                            | Northern      |

| Ummbenin  | 534.2                    | Sennar         |
| Abu Naama | 556                      | Sennar         |
| Elgeneina | 523.8                    | Central Darfur |
| Nyala     | 398.3                    | South Darfur   |
| Kadugli   | 633.1                    | South Kordofan |
| Rashad    | 717.7                    | South Kordofan |
| Damazin   | 712.9                    | Blue Nile      |

## **2.3 Type of available water resources:**

- ✓The main resources of water are the Nile and its tributaries .
- ✓Deep boreholes in the areas with rich aquifers .
- ✓Dug hafirs(water pools) where there is no ground water.
- ✓Hand pumps (shallow wells) with poor production.

## **2.4 The type of the future water resources:**

- ❖Large water treatment plants along the rivers to supply the cities and towns with potable water.
- ❖Collective well fields to supply many villages and communities with unique pipe network.
- ❖Water harvesting technics to make use of the rain water for livestock.

### **3. Policy and Regulations:**

- ☐ Sudan have (18) State Water Corporations +Hawata Wad-Elageili Water Corporation
- ☐ Before 1994, National Water Corporation was the responsible body for water activities in all the states.
- ☐ After that each State Water Corporation became responsible for water resources, supply and distribution.
- ☐ These policies and regulations put national water corporation as a coordinator for the water projects that budgeted on national level only.

### **4. Water rates and Bill collections:**

#### **4.1 The water rates system:**

- Each State have its own system of water rate and will be approved by the state legal council.
- This water rate may not cover all the expenditure of the State Water Corporation.
- Always there was a deficit in the budget of the state water corporations.
- Hawata W.C. is the only one that have an adequate system(Law) that approve the budget by the Board of Directors(Beneficiaries).

#### **4.2 The bill collection system:**

- There are many types of bill collection depend on the policy of each state.
- Some use flat rate system classified according to the Diameter of house connection.
- Some use flat rate with the collection throw electrical windows.
- Few are using water meters difference as consumption mainly Hawata W.C.

# **Hawata Financial Management**

- Setting of water tariff based to cover all the production cost including reserve for replacement and procurement of units and components.
- Annual budget and water tariff will be approved by the board of directors.
- Revenue collection based on water meters difference for water points and house connections.
- Water operators have incentives (3 tins/m<sup>3</sup>) free to cater for water splash and losses.
- Finance report made every month , quarterly and annually.

## **5. Water Supply Services:**

- 5.1 About 65% of the Sudanese population was served by potable and clean drinking water.
- 5.2 There is no continuous supply in Sudan but may reach to 18 hours per day of water availability.
- 5.3 The potable water will be collected in reservoirs or elevated tanks and then distributed to consumers through pipe network.
- 5.4 Non revenue water is always as a constraint to an adequate operation and maintenance system.

## **6.Private sector participation:**

- 6.1 According to the policies of the government the private sector participation will be limited only to work as contractor for the projects that financed either by the government or authorized fund donors in the field of water resources development, water treatment, water distribution. Organization management, leakage repair will be done by the state water corporations workmanship. Some state practiced bill collection through private companies but they failed and now many are doing it throw the national electricity windows.
- 6.2 The national government or state governments are the main pointer to water supply services(e.g. water rates, personnel employment, capital investment) . O/M budgeting is done by the state water corporations.

## **7.Privatization in water supply systems:**

- 7.1 According to the polices mentioned privatization is practiced in a limited water supply services (e.g. projects study and design, executing as contractors, operation and maintenance for newly executed projects etc.).
- 7.2 Privatization will be on form of concession to some companies or as BOOT system with other companies and mainly with national or state owned companies.
- 7.3 As water is the vital important to human being we hope that the government will change its policy towards water supply services and try by some regulations or laws to involve the private sector to carry some activities in water supply systems and I think it will succeed as we have a practice of Hawata project which managed on sharing basis between the beneficiaries (board of directors) and the administration without political interference.

## **Water Supply Administration for Better Management of Water Supply Services (A) in Japan:**

**Country:** Sudan

**Name:** MOHAMED ABDELGADIR MAHDI MOHAMED

**Organization:** Hawata Wad-Elageili Water Corporation

### **I. Service Area:**

1. Size of utility's area of responsibility: ( 25,000 sq.km)
2. Size of utility's present service area: ( 22,000 sq.km)
3. Population of utility's area of responsibility: (327274 )
4. Population of utility's present service area: (190741 )
5. Population served by the utility with piped water supply :(48901 )
6. Number of towns served with piped water: ( 3 )

### **II. Infrastructure Description:**

1. Source of raw water
  - Ground water
  - Direct river abstraction
2. What are the main methods of treatment used?
  - Disinfection
  - Flocculation and sedimentation
3. Capacity of production systems: ( 6100 m<sup>3</sup>/day)
4. Length of water distribution network: ( 400 km)
5. Capacity of storage in network: ( 3870 m<sup>3</sup>)
6. Piped water supply connections:

| Domestic(households) | Non Domestic | TOTAL |
|----------------------|--------------|-------|
| 2520                 | 217          | 2737  |

7. Number of connections with operating water meters:( km)
8. Typical length of service connection from water main to water meter: ( 3 to15 meters)

### **III. Water Consumption & Production:**

1. Volume of water produced by the utility:  
( 1634927 million m<sup>3</sup>/year)
2. Volume of water bought in bulk from other utility/company:  
(            million m<sup>3</sup>/year)
3. Volume of water metered: ( 1404409 million m<sup>3</sup>/year)
4. Estimated un-metered consumption: (            % of metered consumption)
5. Estimate of average meter inaccuracy at typical flows rates:  
(        % of metered consumption)
6. Volume of water billed/sold: ( million m<sup>3</sup>/year)

| Domestic<br>(house hold) | Non domestic<br>Ind.,comm.,Ins. | Bulk water sales | Total   |
|--------------------------|---------------------------------|------------------|---------|
| 292337                   | 45370                           | 1066702          | 1404409 |

**IV. Water supply system performance:**

1. Number of customers who received intermittent supply:  
(            connections)
2. Typical duration of supply ( planned and unplanned supply interruptions): ( 24 hours/day)
3. Typical mains water pressure in your pipe network:  
( 100 meters)
4. Number of water pipe breaks in the distribution network:  
( 688 /year)
5. Required number of tests of treated water for residual chlorine:  
( 52 /year)
6. Number of tests of treated water for residual chlorine carried out:  
( 24 /year)
7. Number of tests of treated water for residual chlorine passed:  
( 24 /year)

**V. Staff**

1. Who does the work in your company:
  - Permanent staff, salaried Government employees

- Permanent staff with contract
  - Contracted out to outside company
2. Number of FTE staff in the company

|                                                                |                                                                 |                        |       |
|----------------------------------------------------------------|-----------------------------------------------------------------|------------------------|-------|
| Corporate services<br>( management,Admin,Finance, Techn, etc.) | Water supply<br>(O&M, Customer services, support services, etc) | Other non water supply | TOTAL |
| 76                                                             | 224                                                             |                        | 300   |

## **VI. Customers**

1. Number of new customers connected to water supply system during the year: ( 436 /year)
2. Number of customer complaints recorded during the year: ( 724 /year)
3. Means by which customer can make a recorded complaint:
  - in person
  - by telephone
4. How does the Utility find out the views of its customers?
  - From customer interactions (letters, telephone calls, enquiry counter, etc.)
  - By responding to customer complaints
5. Typically what is the connection charge for new customers?

|                                                          |              |                  |                           |
|----------------------------------------------------------|--------------|------------------|---------------------------|
| Domestic<br>(Households)                                 | Non domestic | Bulk water sales | Average of all categories |
| Differ according to individual distance and requirements |              |                  |                           |

6. Typically what is the fixed water supply charge/month?

|                                                                |              |                  |                           |
|----------------------------------------------------------------|--------------|------------------|---------------------------|
| Domestic<br>(Households)                                       | Non domestic | Bulk water sales | Average of all categories |
| Differ according to consumption through water meter difference |              |                  |                           |

7. Typically what is the water tariff for metered consumption?

|              |                                                |                                                |                                                |
|--------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|
| Tariff block | Domestic                                       | Non domestic                                   | Bulk water sales                               |
| 1            | 5.5 SDG/m <sup>3</sup> =0.6 USD/m <sup>3</sup> | 5.5 SDG/m <sup>3</sup> =0.6 USD/m <sup>3</sup> | 5.5 SDG/m <sup>3</sup> =0.6 USD/m <sup>3</sup> |

8. What would be the monthly water bill for a household consuming 6 m<sup>3</sup> of water/month? ( 33 SDG = 3.75 USD)

**VII. Questionnaire on Major Constraints in water supply sector**

| Constraints                                         | Rating of Constraints |        |          |

## Country Report-Sudan

### Introduction

Kosti is a major and expanding town located on the west bank of the White Nile river at a longitude of  $32^{\circ} 40'$  east and a latitude of  $13^{\circ} 10'$  north, about 300 km South of Khartoum.

### Water Resources The Hydrogeological of Kosti City

The Hydrogeological of Kosti city is basement complex .

The main Intake of Raw Water Supply to Kosti city from White Nile river and twins transmittion line size 12" long about 2.4 km.

**Main Intake located Near Nile Port**

## Income

## Main Problems of Kosti Water Treatment Plant

|           | Problems                           | Causes                                              | Solutions                                                                       |
|-----------|------------------------------------|-----------------------------------------------------|---------------------------------------------------------------------------------|
| Technical | Bad maintenance & operation        | Technical labor shortage                            | The provision of skilled labor                                                  |
|           |                                    | Lack of training & rehabilitation                   | Attention to the training of engineers & workers                                |
|           |                                    |                                                     | Use of the main maintenance system using computer programs                      |
|           | Frequent wastage of water produced | Lack of application in planning, design & operation | Raise the efficiency of workers in the design & operation                       |
|           |                                    |                                                     | Training on leak detection equipment                                            |
|           |                                    |                                                     | Make the participants are fully aware of the concepts of water loss management. |
|           | Electric supply is unstable        | Deficit in water supply                             | Provide electric generators                                                     |
|           |                                    | Influence the operation of pumps and networks       | connect the station with stable & lasting electric line.                        |
|           | Lack of health and safety rules    | Employment at risk                                  | Improving skills to ensure their safety                                         |
|           |                                    | Suspension of work & lack of production             | Establishment of security & safety department.                                  |

|            | Problems                                     | Causes                                                  | Solutions                                                                            |
|------------|----------------------------------------------|---------------------------------------------------------|--------------------------------------------------------------------------------------|
| Technical  | Treatment of drinking water purification     | Movable diseases by water                               | Training for Chemical engineers                                                      |
|            |                                              | The high proportion of turbidity                        | Use modern type of laboratory equipment                                              |
|            | Amount of water produced is limited coverage | Water purification unit is eligible                     | Improve water plant raise productivity by modern means                               |
| Managerial | Lack of independence of water                | Representative government intervention in the political | The independence of the water to generate sufficient income .                        |
|            |                                              | Income not enough to cover operation cost               | Activate the low of water to punish abstainers to push them to pay invoices or bill. |
|            | Writing Report                               | Writing by hands                                        | Improve Computer Skills                                                              |
|            | Water Administration board                   | Ineffective                                             | Activation the Administration board                                                  |
|            |                                              | No regularly meeting                                    |                                                                                      |

|                       | Problems               | Causes                        | Solutions                         |
|-----------------------|------------------------|-------------------------------|-----------------------------------|
| <b>Manageremental</b> | Fees set up not enough | Lack of water meters          | Install flow meter                |
|                       |                        | Lack of financial calculation | Advance Training for accountant s |

### Kosti Water Treatment Plant

Problem of Kosti water treatment plant

1/Capacity for sedimentation basins is small.

2/capacity for filters is small.

3/ capacity of the storages tank are small.

This capacity is not enough for current needs of Kosti population.

4/ pollution in the intake.

5/ chemical pollutions from agricultural fertilizers.

6/ chemical pollutions from River transport.

- 7/ there is no fence in the intake
- 8/ the grass and scums
- 9/ the grass and moss enters through the intake channel
- 10/ pollution in the intake from River transport
- 11/ frequent damage pumps
- 12/ water leaking in the pipe from intake

- 13/ water treatment plant operates more than design capacity
- 14/ storage capacity of pure water is not enough
- 15/ the rapid mixing is broken
- 16/ the media is not good
- 17/ water leaking around the plant makes the grass growing frequent
- 18/ the discharge of Kosti city located upstream.
- 19/ lack of chemicals for treated water.

20/ quick mixing in the clarifier (1) are not working.  
21/ the scraper is not working so will lead to accumulation of silt in the sedimentation basin.  
22/ rust in the steel filters from inside chemically affect the water.  
23/ the media is too short.  
24/ leaking in the pipe of the back washing.  
25/ leaking in the pipe from pure water to the tank.  
26/ flouting valves are not working.  
27/ some damage in the control valves.  
28/ lack of drainage water on top of reserves tank.  
29/ short of reserves tank.  
30/ there is no control valves in the network pipes.  
31/ the equipment in the laboratory are insufficient.  
32/ the environment of the laboratory are not good.  
33/ lack of chemicals for treated water all year

34/ quick mixing is not operate.  
35/ scraper is not function.  
36/ for chemicals they are not use it all time.  
37/ the moss on top of the sedimentation basin.  
38/ no maintains for washing valves.  
39/ mixing in the filters 1-2-3 are not working.  
40/ the flow water filter too quickly so that it defect the media.  
41/ all valves washing is not operating.  
42/ inefficient air pump.  
43/ the grass growing around the clarifiers.  
44/ the level of reservoirs below ground level.

## **Present Situation**

### **1-White Nile State Water Co Profile:-**

**1-1** White Nile State Water co

**1-2**The main work of our organization is providing drinking water for urban and rural area.

**1-3** White Nile State Water Co is local government.

**1-4**My official position is manager of project and research department and my qualification is mechanical engineer.

**1-5**The organization chart of White Nile State Water Co (attach).

### **2-Current situation of White Nile State Water Co:-**

**2-1** Geographical background

**2-2** Precipitation per one month and/or one year. Please attach the last 10 year.(not available )

**2-3**The main water resource is White Nile River, ground water and rain water.the situation of those resources is rich.

**2-4** The intake water volume of Kosti city is 36000 m<sup>3</sup> per day.  
12,960,000 m<sup>3</sup> per year.

**2-5** The type of water resources for the future is White Nile.

### **3-Current situation of policy and regulation in White Nile. (attach)**

#### **4- Current situation of water rate and bill collection system in White Nile.**

**4-1**Water rate systems (W.N water tariff) attach.

**4-2** Bill collection system through electric company in one bill and direct collection by SWC's.

### **5- Current situation of water supply services.**

**5-1**Population Ratio

**5-2** proportion of consumers with 24 hours supply, average number of hours per day of water availability to most people about 10 hours.

**5-3** The distribution water use for the potable water directly.

**5-4** Non revenue water (NRW).

**5-4-1** Martyr (free)

**5-4-2** staff (free)

**5-4-3** Unregistered

**5-4-4** Water loses.

**5-4-5** Water stealing

**5-4-6** Water sharing

**6- Current situation of private sector participation.**

**6-1**-Water resources development by:-

- Ministry of water sources and electricity.

- International organization -JICA (Kassala project) Chinese (Sinja WTP).
- Water (treatment, distribution, leakage repair and management) by SWC's.
- Bill collection system through electric company in one bill and direct collection by SWC's.

## **6-2- Current situation of involvement of national government in water supply services:-**

- Water rates (Water tariff shall be adopted by Legislative Council)
- Personal employment and O/M budgeting from revenue of water.

## **7- Current situation of privatization:-**

### **7-1 Privatization in Water sector in:-**

- Drilling of water yard
- installing of water tank
- Construction of Water treatment plant.
- Funding big water project by BOOT system (international organization).

### **7-2 Construction of pipe network by state owned company.**

### **7-3 Future privatization (Unclear vision) in case of the political situation.**

## **I. Service Area:-(Kosti city)**

- 1-Size of Utility's area of Responsibility :( 16183 sq.km)**
- 2- Size of Utility's present service area :( 6473.2 sq.km)**
- 3- Population of Utility's area of Responsibility (404763)**
- 4- Population of Utility's present service area (314763)**
- 5- Population serviced by Utility with piped water supply (314763)**
- 6-Numer of towns served with piped water (8 towns in White Nile State ).**

## **II. Infrastructure Description:-**

- 1-Source of raw water**
  - From White Nile River.
- 2- The main methods of treatment used is flocculation and sedimentation.**

**3**-Capacity of production systems (18720m<sup>3</sup>/day).

**4**- Length of water distribution network (600km).

**5**-Capacity of storage in network (2000m<sup>3</sup>).

**6**-Piped water supply connections:-

| <b>Domestic<br/>(Household)</b> | <b>Non Domestic<br/>(Industrial,commercial,Institutional,other)</b> | <b>Total</b> |
|---------------------------------|---------------------------------------------------------------------|--------------|
| 17499                           | 330                                                                 | 17829        |

**7**-Number of connections with operating water meter (0)

**8**-Typical length connection from water main to water meter (0)

### **III. Water consumption and production:-**

**1**-Volume of water produced by the utility :(6739 million m<sup>3</sup>/year)

**2**- Volume of water bought in bulk from other utility/company ).  
(not available)

**3**- Volume of water meter :( not available)

**4**- Estimated un-metered consumption :( not available)

**5**- Estimated of average meter inaccuracy at typical flows  
rates :( not available)

**6**- Volume of water billed /sold: 6.739 million m<sup>3</sup>/year)

| <b>Domestic<br/>(Household)</b> | <b>Non Domestic<br/>(Industrial,commercial,Institutional,other)</b> | <b>Bulk<br/>water<br/>sales</b> | <b>Total</b> |
|---------------------------------|---------------------------------------------------------------------|---------------------------------|--------------|
| 3.209                           | 0.297                                                               | 3.233                           | 6.739        |

### **IV. Water Supply System Performance:-**

**1**-Number of customers who received intermittent supply (17829 connections)

**2**-Typical duration of supply (planned and un planned supply interruptions) :(10 hours/day)

**3**- Typical mains water pressure in your pipe network.(60 m)

**4**- Number of water pipe breaks in the distribution network (144/year)

**5**-Required number of tests of treated water for residual chlorine :( 365/year).

**6-** Number of tests treated water for residual chlorine carried out :( 365/year).

**7-** Number of tests treated water for residual chlorine passed :( 365/year).

#### **V. Staff:-**

**1-** The work in our company was done by:

- Permanent staff, salaried government employees.

**2-**Number of FTE\*staff in WNSWC:-

| <b>Corporate Services<br/>(Management,Admin,<br/>Finance and<br/>Technical</b> | <b>Water<br/>Supply(O&amp;M/Customer<br/>Services and Support<br/>Services)</b> | <b>Other non-<br/>water<br/>supply(e.g.<br/>wastewater,<br/>drainage and<br/>environment)</b> | <b>Total</b> |
|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|--------------|
| <b>87</b>                                                                      | <b>120</b>                                                                      | <b>0</b>                                                                                      | <b>207</b>   |

#### **VI. Customers:-**

**1-** Number of new customers connected to water supply system during the year (360 / year)

**2-**Number of customers complains recorded during the year (2550/year)

**3-** Means by which customer can make a recorded complaint:-

-In person and letter

**4-** The Utility find out the views of its customers by:-

- Customers interaction

**5-**Typicaly\*what is connection charge for new customers?

| <b>Domestic<br/>(Household)</b>                                                                     | <b>Non Domestic<br/>(Industrial,<br/>commercial,<br/>Institutional,<br/>other</b> | <b>Bulk water sales</b> | <b>Average of<br/>all<br/>categories</b> |
|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------|------------------------------------------|
| 1 <sup>ST</sup> class=(830)SDG<br>2 <sup>nd</sup> class =(730)SDG<br>3 <sup>rd</sup> class=(626)SDG | From (905)SDG<br>up to (1580)SDG                                                  | -                       | -                                        |

**6**-Typicaly\*what is fixed water supply charge /month?

| <b>Domestic<br/>(Household)</b>                                                                  | <b>Non Domestic<br/>(Industrial,<br/>commercial,<br/>Institutional,<br/>other</b> | <b>Bulk water sales</b> | <b>Average of<br/>all<br/>categories</b> |
|--------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------|------------------------------------------|
| 1 <sup>ST</sup> class=(45)SDG<br>2 <sup>nd</sup> class =(35)SDG<br>3 <sup>rd</sup> class=(25)SDG | From (75)SDG up<br>to (300)SDG                                                    | -                       | -                                        |

**7**- Typically\*what is water tariff for metered consumption?

- No metered consumption only flat rate.(see the details in water tariff )

**8**- What would be the monthly water bill for household consumption 6m<sup>3</sup> of water/month?

Firstly there is no water meter but only flat rate according to the pipe size e.g.:-

| <b>Pipe Size<br/>(inch)</b> | <b>Water Tariff<br/>(SDG/month)</b> |
|-----------------------------|-------------------------------------|
| "1                          | 45                                  |
| "3/4                        | 35                                  |
| "1/2                        | 25                                  |

## VII. Questionnaire on Major Constrains in Water Supply Sector:-

| Constraints                                          | Rating of constraints |        |          |
|------------------------------------------------------|-----------------------|--------|----------|
|                                                      | Very Severe           | Severe | Moderate |
| 1. Lack of definite government policy for the sector |                       |        | ✓        |
| 2. Funding limitations                               |                       |        | ✓        |
| 3. Inadequate or Outmoded legal framework            |                       |        | ✓        |
| 4. Inappropriate institutional framework             |                       | ✓      |          |
| 5. Inadequate water resources                        | ✓                     |        |          |
| 6. Insufficient knowledge of water resources         |                       | ✓      |          |
| 7. Inadequate cost-recovery framework                |                       |        | ✓        |
| 8. In sufficiency of trained personnel               |                       |        | ✓        |
| (1) Professional                                     |                       |        | ✓        |
| (2) Sub-professional                                 |                       |        | ✓        |
| 9. Lack of planning and design criteria              |                       |        | ✓        |
| 10. Inappropriate technology                         |                       |        | ✓        |
| 11. Intermittent water service                       |                       |        | ✓        |

## **Drafting Improvement Plan**

**1. Country: Tajikistan**

**2. Name: RAHIMOV Nazarali**

**3. Position: Director**

**4. Organization: Vodokanal of Kurgan-Tyube city**

1

## **Contents of Improvement Plan Presentation**

- ✓ **Plan Title: “Decrease of Non Revenue Water”**
- ✓ **Background**
- ✓ **Input (Resources required)**
- ✓ **Activity**
- ✓ **Due Date**
- ✓ **Outcome**
- ✓ **Cost**
- ✓ **Verification (Evaluation)**

# Background

- ◆ Water Supply and Sewerage Services of Kurgan-Tyube city (Vodokanal of Kurgan-Tyube) is an Affiliated Enterprise of State Unitary Enterprise “Khojagii Manzilii Komunalii”. State Unitary Enterprise “Khojagii Manziliyu Kommunalii” is under direct subordination of the Government of the Republic of Tajikistan.
- ◆ The Republic of Tajikistan is located in the south-eastern part of Central Asia. The area of the country is 143.100 km<sup>2</sup>. Tajikistan is a mountainous country: 93 % of its area is mountainous. Tajikistan has huge reserves of fresh water. Kurgan-Tyube is the city located in south-west of Tajikistan, and is the administrative centre of Khatlon region. Kurgan-Tyube city is located 100 km far from Dushanbe city.
- ◆ Kurgan-Tyube Vodokanal has two water resources: underground and river water. Main water resource is river water which comes from Vakhsh river. The underground wells are very old, constructed in 1970<sup>th</sup>, therefore it is needed of reconstruction.
- ◆ The intake water volume is 22000m<sup>3</sup> per one day and around 8 million cubic meters per one year.
- ◆ The population ratio to be served drinking water in Kurgan-tube city: 70%; not to be served: 30%
- ◆ Total of 38% of Non revenue water: 5% unbilled consumption, 8% apparent losses, 25% real losses.

|----|-------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-----------------------------|----------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | Installment of new water pipelines.<br><br>Installment of water meters. | II Phase of Improvement of water in Kurgan-Tyube city by EBRD (under consideration)<br><br>Other Resources | Kurgan-Tyube Vodokanal, KMK | 2018     | Around 6 million USD  | The water loss is decreased due to replacement of old pipes.<br><br>The installed watermeters will prevent actual water losses in consumers. | The NRW is decreased up to 20%: It is expected that 35% of existing pipelines will be replaced and around 6000 water meters will be installed in 2 <sup>nd</sup> Phase of EBRD's Project (15% has been already replaced in Phase I of the Project). |

4

# **Input (Resources required)**

**List inputs from your side,**

**Manpower,  
Place,  
Information.**

5

## **Person Responsible and role**

- ◆ **Keyperson: Director of Kurgan-Tyube Vodokanal**
- ◆ **Key ministry: SUE “KMK”**
- ◆ **Task force: KT-Vodokanal and KMK**
- ◆ **Steering committee: KT-Vodokanal, KMK, Donor Agency, Local Government.**

6

## **Activity to be carried out**

**Under Phase I of EBRD's Project in Kurgan-Tyube 15% of old pipelines were replaced. And under Phase II of the Project it is expected that 35% of pipelines will be replaced.**

**Phase II of the EBRD's Project is also considers installation of around 6000 units of water meters.**

## **Due Date**

- ◆ **Short Term**
- ◆ **Mid, Long Term: 3 years (2018)**

## **Expected Outcome**

**The installation of new pipelines will decrease the real losses, which is 25% for the time being.**

**Installation of water meters will decrease the apparent losses.**

**All these will promote to decrease of NRW in Vodokanal.**

## **Estimated costs (USD)**

**Around 6 million USD is expected for replacement of pipelines and installation of water meters:**

**0.5 million USD for water meter;**

**5.5 million USD for water pipes;**

# Indicators for verification

**8000 consumers in total will be provided with water meters;**

**75 km of existing pipelines in total will be replaced by new pipelines;**

**NRW will be reduced up to 20%.**

## COUNTRY REPORT

Chambeshi Water and Sewerage Company Limited

### **Current Operations, Achievements, Challenges and Way forward**

## **ZAMBIA**

Willard M Mutoka – Director Technical Services - ChWSC

© 2015

## **1. MANAGEMENT OF WATER QUALITY**

### **1.1 CURRENT SITUATION AND MAJOR CHALLENGES**

#### **CURRENT SITUATION**

- ✓ Water Chlorination is usually manual.
- ✓ One Fixed Laboratory to analyze RC and Bacteriological and limited Physio-chemical tests available.
- ✓ Portable kits available to analyze RC only.
- ✓ Qualified and experienced Chemist (at Diploma Level) available for water quality analysis
- ✓ 91% Compliant to Zambia Bureau of Standards(below the minimum % Compliant)

#### **MAJOR CHALLENGES**

- Dilapidated water treatment, storage and distribution infrastructure
- Too basic water supply systems (no sedimentation, flocculation filtration, and storage reservoirs)
- No Integrated approach to water safety planning as a Water Sector
- Sources are multi-purpose results heavy contamination
- Reactive approach to water quality management
- Limited both fixed and portable laboratories for bacteriological tests, turbidity meters, etc
- Lack of control on Land use in the water source catchment areas
- Distant geographical locations of Districts from the main fixed Laboratory

Kaputa District – Existing water Intake at Choma river

Mbala District – Existing water treatment Tank at Chila Plant

# 1. MANAGEMENT OF WATER QUALITY

## 1.2 CURRENT ACTIONS AND ANY ACHIEVEMENTS

### CURRENT ACTION AGAINST THE PROBLEMS

- ✓ Ongoing projects to overhaul of distribution networks, modernizing water treatment plants, installation of motorized online chlorinators
- ✓ Establishment of Water Safety Teams
- ✓ Capacity building by training District Managers and Plant Operators on Water Safety Planning
- ✓ Plan of equipping of current Lab and constructing of a new fixed Lab educe on geographical distances and procuring portable Kits in 2015
- ✓ Strengthening the water quality management by employing SHEWA,.
- ✓ Stakeholder engagement in water source catchment preservation planned for 2015 and beyond

Kaputa Water Project -  
Distribution Network Mats

Chinsali Water Project - Modular Plant Installation

Isoka District - Construction of 750m3 Ground Water Reservoir

### ANY ACHIEVEMENT

Raising water quality compliant from 81% - 91% for 2014 Water Quality Results (National Water and Sanitation Council).

# 1. MANAGEMENT OF WATER QUALITY

## 1.3 MONITORING SYSTEM

- Annual water Sampling , Monitoring Reporting plans exist and are approved by the National Regulator

Kaputa-District Stakeholders Engagement

## 1.4 IMPLEMENTATION OF WATER SAFETY PLANS

- Strengthening the water quality management by employing SHEWA.
- Stakeholder engagement in water source catchment preservation and water supply quality customer feedback began in 2013 and in progress

Mpika District Stakeholders Engagement

## 2. REDUCTION OF NRW

### 2.1 CURRENT SITUATION AND MAJOR CHALLENGES

#### CURRENT SITUATION

- ✓ 58% NRW 2014 NWASCO Report
- ✓ Established a WDM Team
- ✓ 44% Metering ratio on 16, 450 individual connections
- ✓ Calculation based on estimates, due to low metering ratio and lack of production meters

#### MAJOR CHALLENGES

- Dilapidated water treatment, storage and distribution infrastructure
- Lack of adequate water distribution storage Reservoirs, hence into direct pumping.
- Vandalism of Primary Distribution Main
- Illegal Water Consumers
- Lack of Water Demand Management Equipment
- Lack of Network Repair materials.

Elevated Tank at a School in Mpika

Water overflowing

Vandalized TAZARA Rising Main – Chitulika, Mpika District

## 2. REDUCTION OF NRW

### 2.2 CURRENT ACTIONS AGAINST PROBLEMS

- Ongoing overhaul of Distribution networks, construction of Elevated water reservoirs.
- Metering exercise to attain 100% metering ratio by 2016
- Equipping and strengthening of the WDM Team
- Zoning of Supply areas and install Zonal Meters
- Stakeholder engagement to sensitize them on cost of vandalism

### 2.3 ANY ACHIEVEMENT

- ✓ Reduction of NRW from 67% - 58 % \*
- ✓ Increased Metering ratio from 33% - 44%\*
- ✓ Increased Hours of supply from 10hrs – 13hrs\*

note \* approved by NWASCO for 2014 Sector Report

## 3. WATER SUPPLY SERVICES STANDARDS

### 3.1 CURRENT SITUATION AND CHALLENGES

#### CURRENT SITUATION

54%

O &M

Cost

Coverage

Water

Quality 91%

Compliant

66%

Water Supply

Coverage

44%

Metering

Ratio

20%

Sanitation

Coverage

74%

Collection

Efficiency

#### CHALLENGES

- Lack of Capital Investment in Sanitation expansion projects
- Poor Power supply services (low and unstable voltages)
- Lack of Standby Pumping sets
- Frequent breakdown of machinery due to old state
- Unskilled Operative and Maintenance staff
- Dilapidated Infrastructure and inadequate water storage reservoirs
- Uneconomical Tariff
- High labour turnover due to poor remunerations

## 3. WATER SUPPLY SERVICES STANDARDS

### 3.2 ACTIONS TO MITIGATE

- ✓ Currently Construction and Rehab of Water Supply and Sanitation Systems going on in 5 District at a cost of more than **USD29 Million**
- ✓ Currently Consultancy Services being undertaken in 3 Districts to design a complete water supply and sanitation systems at cost of more than **USD1.6Million**
- ✓ Consultancy Services are completing a Prefeasibility Study for the Company to Prioritise Investment and Development of a Master Plan for investment attraction
- ✓ Implementation of a Preventive Maintenance Management started in 2015
- ✓ Recruitment of Qualified Staff and In-house training started in 2013 is ongoing.

### 3.3 MONITORING BY PERFORMANCE INDICATORS

- Three year Minimum Service Level Guarantees are signed with the Regulator NWASCO
- Performance Contracts with all Staff introduced in 2014
- Annual Strategic Plans and Quarterly Review
- Benchmarking with other commercial Utilities through Interactive visits.

NWWSSC & ChWSC Staff in August 2014

## **4. MANAGEMENT OF WATER SUPPLY SERVICE ON A SELF-SUPPORTING BASIS**

### **4.1 CURRENT SITUATION MAJOR CHALLENGES**

#### **CURRENT SITUATION**

- Low water coverage at 66%
- Low collection efficient at 74%
- Lack of investment funds

#### **MAJOR CHALLENGES**

- Low expansion rate to new developed areas due to lack of capital funds
- Low economic activities in service areas; mostly GRZ workers, retirees, low income groups, less privileged.
- Uneconomical Tariff
- Political Interference

### **4.2 CURRENT ACTIONS AGAINST THE PROBLEMS**

- ✓ Cost sharing (or Capital Contribution ) with Stakeholders (e. g developers ); in agreement with the Water Policy to open new areas.
- ✓ Ring fencing of Investment Account and Bulk Procurement of New Connection Materials.

## **5. RECENT MAJOR ACHIEVEMENTS IN WATER SUPPLY SERVICES/ MANAGEMENT**

- ✓ Improving water quality from 81% - 91%
  - ✓ Employment of Qualified Staff
  - ✓ Prudent implementation of ongoing Capital Projects
  - ✓ Construction Head Office
  - ✓ Improvement of Water Supply Hours from 10
- 13

## **6. EXPECTATIONS FORM JAPAN WATER SUPPLY SERVICES/ MANAGEMENT**

- Real Solutions to Non Revenue Water Reduction and Implementations – Case Studies
- Case Studies on Water Safety Plans formulation and Implementation
- Meter Selection and Policy formulation
- Simplified Sanitation Designs and Implementation for Peri-urban or Low income communities.
- Strategies on Energy Efficiencies, Energy Policy and Motor Policy formulation
- Equipment and Measuring Techniques employed in NRW Monitoring, Water Demand Management, and Pressure Management.

## **COUNTRY REPORT**

Chambeshi Water and Sewerage Company Limited

### **Present Situation of the Water Supply Service (Annex 2)**

#### **ZAMBIA**

Willard M Mutoka – Managing Director - ChWSC

## 2. WATER SOURCES

### 2.1 Geographical Background

**Note:**  District

## 2. WATER SOURCES

### 2.1 Geographical Background

The CU lies in the Northern part of Zambia, servicing Northern and Muchinga Provinces, covering about a fifth of Zambia, 8° S, 29° E north of the province and 11° S, 32° E south of the province, within 11° south of the equator. The area is characterized by four seasons; cool dry winter running from June – July, the dry, warmer, windy and humid pre – rainy season running from August – October, the wet, humid rainy season from November – March and the cool, dry post rainy season from April – May.

The area is also influenced by hilly topography, with Muchinga Escarpment on the east, and various hills scattered in the region.

The climate is influenced by the shifting of the Inter-Tropical Convergence Zone (ITCZ), due to the position of the sun, hence causing a marked pattern of precipitation. The northern part of the area in Kaputa receives an average of 1300mm of rainfall while the southern part, Mpika receives a minimum of 850mm annually.

The temperature varies between 7°C and 37°C in the cold and hot season, respectively.

## 2. WATER SOURCES

### 2.2 Precipitation

Table of Precipitation for Isoka District (source Met Dept. – Kasama)

| S/NO | SEASON    | ANNUAL PRECIPITATION (MM) |
|------|-----------|---------------------------|
| 1    | 2014/2013 | -                         |
| 2    | 2013/2012 | 1,856.6                   |
| 3    | 2012/2011 | 796.8                     |
| 4    | 2011/2010 | 877.4                     |
| 5    | 2010/2009 | 907.9                     |
| 6    | 2009/2008 | 973.3                     |
| 7    | 2008/2007 | 836.9                     |
| 8    | 2007/2006 | 1,188.7                   |
| 9    | 2006/2005 | 859.1                     |
| 10   | 2005/2004 | 1,040.7                   |

## 2. WATER SOURCES

### 2.2 Mean Annual Precipitation

(Source: Government Water Policy Document of 1994)

## 2. WATER SOURCES

### 2.3 Types of Water resources

The region is rich in surfaces water, especially the north western part, where there is Lake Bangweulu, Lake Mweru, Mweru - Wantipa and Lake Tanganyika.

The area is also rich in big perennial rivers, including, Chambeshi river, Lukupa, Lubu, Lufubu, Lunzuwa, except in Nakonde and Isoka Districts where the river dries up, and only spring water is available, respectively.

Hence, the CU's source of water is surface water in all the districts except Isoka, where the two springs are supplemented with ground water. Chilubi and Mpulungu Districts are abstracting from Lakes Bangweulu and Tanganyika, respectively.

Note: CU – Commercial Utility

## 2. WATER SOURCES

### 2.4 Daily and Annual Intake Volume

| S/No. | Description           | m <sup>3</sup> |
|-------|-----------------------|----------------|
| 1     | Intake Water per day  | 31,342         |
| 2     | Intake Water per Year | 11,440,000     |

### 2.5 Type of Water Resources for the future

The water resources for the future remains as described above, in item 2.1.

This is largely dependent on the Governments effort to enhance water resource management, by conserving trees in water catchment areas and reduce human activities in these areas.

## 3. Policy and Regulations

### 3.1 POLICY

Not until 1993, the Government had no policy on Water Resource Management. During that year the Gvt. came up with a project to develop a National Water Policy which was completed in Sept 1993 and Launched in 1994.

- the Integrated Water Resources Management and Water Efficiency Implementation Plan (2005-2030) and the Sixth National Development Plan (2011-15)
- NATIONAL RURAL WATER SUPPLY AND SANITATION PROGRAM
- NATIONAL URBAN WATER SUPPLY AND SANITATION PROGRAM
- WATER RESOURCE MANAGEMENT AUTHORITY (WARMA)
- NATIONAL WATER SUPPLY AND SANITATION COUNCIL (NWASCO)

## 3. Policy and Regulations

### 3.2 REGULATIONS

To ensure effective and efficient water resource management, utilisation and conservation, to support economic growth, poverty reduction, and water supply to domestic, commercial, industrial, and the pro-poor, agricultural use, the government came up with regulatory bodies;

#### 1. NWASCO, Regulates;

- Water supply quality
- Water supply tariff
- Water and sanitation coverage
- NRW reduction
- Hour of water supply, pressure, etc
- Customer complaint and application for new connections
- Approves licenses for Commercial Utilities and Private Operator schemes

#### 2. WARMA, Regulates;

- Water resources and grants licenses for water abstractions

## 4. Water Rates and Bill collection

### 4.1 Water Rates (see slide 29)

Water rates are regulated and approved by Nwasco after the CU applies, stating reasons for increasing the water Tariff.

- The rates are categorized;
  - Domestic, - metered and unmetered for Public points, low, medium and high cost
  - Commercial, Institution, - metered and unmetered.
  - Bulk purchases, etc.
  - Pre-paid water consumptions

### 4.2 Bill Collection System

- Billing is done monthly, once bills are distributed manually, consumers are given up to 14 days to voluntarily pay there bills at designated collection points.
- Consumers are forced to pay by disconnecting water supply for outstanding bills for more than 14 days, after announcement is done and 7 days grace period is given.

## 5. Water Supply Services

### 5.1 Population Ratio

| S/No. | Description             | Figure   |
|-------|-------------------------|----------|
| 1     | Total population        | 312, 298 |
| 2     | Total Population Served | 212, 298 |
| 3     | Water Supply Coverage   | 66.1%    |

(Source: 2014 Nwasco Sector Report)

### 5.2 Hours of Supply

| S/No. | Description                      | Figure |
|-------|----------------------------------|--------|
| 1     | Proportion of consumers on 24hrs | 6.4%   |
| 2     | Average hours of water supply    | 13hrs  |

### 5.3 Does the distribution water use for the portable water directly: YES

### 5.4 Non Revenue Water (NRW): 58% (Source: 2014 Nwasco Sector Report)

## 6. Private Sector Participation

### 6.1 Status of Private Sector Investment

NIL

### 6.2 Current Involvement of National Government in Water Supply Services

| S/No. | Description          | % Involvement                 |
|-------|----------------------|-------------------------------|
| 1     | Water rates          | 100% Regulates through Nwasco |
| 2     | Personnel Employment | Nil                           |
| 3     | O/M Budgeting        | Nil                           |
| 4     | Capital Investment   | 100%                          |
| 5     | Payment of GRZ Bills | 10%                           |

## **7. Current Situation of Privatization**

### **7.1 Current situation of Privatization**

- Water Supply and Sanitation Act of 1997 made possible the formation Commercial Utilities.
- 11 CUs have been formed since then, and these are owned by various Local Councils that are the Ministry of Local Government and Housing (MLGH).
- National Water Supply and Sanitation Council, issues operating licenses to CUs.
- Private participation is very limited to water schemes for private companies where it is uneconomical for CUs to operate.

### **7.2 Type of Privatization**

- State Owned Enterprises (or Quasi-Government), Local Councils, under MLGH, owns the CUs.
- The CUs are legal entities and are expected to operate commercially.

### **7.3 Future Direction of Privatization**

- Not defined

## **I. Service Area**

- 1. Size of Utility's area of Responsibility: (165,456 sq.km)**
- 2. Size of Utility's present service area: (109,200.6 sq.km)**
- 3. Population of Utility's area of responsibility: (1,105,824)**
- 4. Population of Utility's present service area: ( 321,104)**
- 5. Population served by the Utility with piped water supply: (136,148)**
- 6. Number of towns served with piped water: (12)**

## II. Infrastructure Description

1. Source of raw water (*please tick relevant boxes*)
  - ☐ bulk water from another utility / company
  - ☒ storage reservoir / impoundment
  - ☒ direct river abstraction
  - ☒ ground water
  - ☐ other, please specify \_\_\_\_\_
2. Main methods of treatment (*please tick relevant boxes*)
  - ☐ none
  - ☒ disinfection
  - ☒ filtration
  - ☐ flocculation and sedimentation
  - ☐ aeration
  - ☐ desalination
  - ☐ other, please specify \_\_\_\_\_

## II. Infrastructure Description

3. Capacity of production systems: (36,752.31 m<sup>3</sup>/day)
4. Length of water distribution network (1.25 Km)
5. Capacity of storage in network: ( 22,274m<sup>3</sup> )
6. Piped water supply connections: *please specify how many in each category*  
(2015 Data)

| Domestic<br>(Households) | Non Domestic             |               |       | Total  |
|--------------------------|--------------------------|---------------|-------|--------|
|                          | Industrial<br>Commercial | Institutional | Other |        |
| 15,529                   | 881                      | 265           |       | 16,675 |

7. Number of connections with operating meters: (7,032Nos)
8. Typical length of service connection from water main to water meter: (571, 495 m)

### III. Water Production & Consumption

1. Volume of water produced by utility: (10.36 million m<sup>3</sup>/year)
2. Volume of water bought in bulk from other utility / company: (0 million m<sup>3</sup>/year)
3. Volume of water metered: (1.30million m<sup>3</sup>/year)
4. Estimated un-metered consumption ( % of metered consumption)
5. Estimate of average meter inaccuracy at typical flow rates (5% of metered consumption)
6. Volume of water billed / sold: *please specify how much* (million m<sup>3</sup>/year) in each category

| Domestic<br>(Households) | Non Domestic            |               |       | Total |
|--------------------------|-------------------------|---------------|-------|-------|
|                          | Industrial & Commercial | Institutional | Other |       |
|                          |                         |               |       | 4.140 |

### IV. Water Supply System Performance

1. Number of customers who received intermittent supply: (15,000 connections)
2. Typical duration of supply (planned and unplanned supply interruptions): (4 hours / day)
3. Typical mains water pressure in your pipe: (6 meters)
4. Number of water pipe breaks in the distribution network: ( # per year)
5. Requested number of tests of treated water for residual chlorine: (1,925 # per year)
6. Number of tests of treated water for residual chlorine carried out: (1,949 # per year)
7. Number of tests of treated water for residual chlorine passed: (1,616 # per year)

## V. Staff

1. Who does the work in your company (*please tick relevant boxes*)

- ☐ permanent staff, salaried Government employees
- ✓ payment staff, with contract
- ☐ casual / part-time, contract staff
- ✓ casual / part-time, wages
- ✓ contracted out to outside company /agency
- ☐ other, please specify \_\_\_\_\_

2. Number of FTE\* staff in the company(*please tick relevant boxes*)

| Corporate Services<br>(Management,<br>Admin, Finance,<br>Technical, etc) | Water Supply (O &<br>M, Customer<br>Services, Support<br>Services) | Other non water supply<br>(e.g. waste water, drainage,<br>environment services) | TOTAL      |
|--------------------------------------------------------------------------|--------------------------------------------------------------------|---------------------------------------------------------------------------------|------------|
| <b>33</b>                                                                | <b>122</b>                                                         | <b>4</b>                                                                        | <b>159</b> |

\*FTE = Full Time Equivalent staff (i.e. convert part-time and casual staff to equivalent full time staff)

## VI. Customers

1. Numbers of customers connected to water supply during the year: ( 588 # / year)

2. Number of customer complaint recorded during the year: ( 18,600 # / year)

3. Means by which customers can make a recorded complaint (please tick relevant boxes)

- ✓ in person
- ✓ by telephone
- ☐ by email
- ✓ by letter
- ✓ other method, please specify - Social network - Facebook

4. How does the Utility find out the views of its customers? (please tick relevant boxes)

- ✓ from customer interactions (letters, telephone calls, enquiry counter, etc.)
- ✓ by responding to customer complaints

## VI. Customers

- ✓ from customer surveys, questionnaires, etc.
- ✓ by market research
- ✓ Other method, please specify: Phone in radio programs

5. Typically\* what is the connection charge for new customers? *(please specify how much in each category)*

| Domestic<br>(Households)                         | Non Domestic<br>(Industrial, Commercial,<br>Institutional, other) | Bulk water sales | AVERAGE of all<br>categories |
|--------------------------------------------------|-------------------------------------------------------------------|------------------|------------------------------|
| Cost of 10 M<br>pipe +<br>associated<br>fittings | Cost of 10 M pipe +<br>associated fittings                        |                  |                              |
|                                                  |                                                                   |                  |                              |

## VI. Customers

6. Typically\* what is the fixed water charge / month? *(please specify how much in each category)*

| Domestic<br>(Households) | Non Domestic<br>(Industrial, Commercial,<br>Institutional, other) | Bulk water sales | AVERAGE of all<br>categories |
|--------------------------|-------------------------------------------------------------------|------------------|------------------------------|
| See attached tariff      |                                                                   |                  |                              |
|                          |                                                                   |                  |                              |

7. Typically\* what is the water tariff for metered consumption? *(please specify how much in each category)*

*(see attached tariff)*

8. What would be the monthly bill for a household consuming 6m<sup>3</sup> of water / month? (K14.04 (USD1.82))

## **Chambeshi**

# **VII. Questionnaire on Major Constraints in water supply.**

The constraint factor listed may prevent the participant's sector from accelerated development. Mark the appropriate boxes so that they will show whether these factors represent a very severe (vs), severe(s) or moderate (m) impediment to the overall development of the entire sector. Constraints are usually inter-related. Also, constraints ranking is subjective and will vary depending on the agency that makes the evaluation. However, it may be possible to determine the relative importance among them. Please indicate with the mark (✓) for the situation of major constraints in the table below.

| Constraints                                     | Rating of constraints |   |   |
|-------------------------------------------------|-----------------------|---|---|
|                                                 | VS                    | S | M |
| 1. Lack of definite govt. policy for the sector |                       |   |   |
| 2. Funding limitations                          | ✓                     |   |   |
| 3. Inadequate or outmoded legal framework       |                       |   |   |
| 4. Inappropriate institutional framework        |                       |   | ✓ |
| 5. Inadequate water resources                   |                       |   |   |
| 6. Insufficient knowledge of water resources    |                       |   |   |
| 7. Inadequate cost-recovery framework           |                       |   | ✓ |
| 8. Insufficient trained personnel               |                       | ✓ |   |

## VII. Questionnaire on Major Constraints in water supply.

| Constraints                                | Rating of constraints |   |   |
|--------------------------------------------|-----------------------|---|---|
|                                            | VS                    | S | M |
| (1) Professional                           |                       | √ |   |
| (2) Sub-professional                       |                       | √ |   |
| 9. Lack of planning and design criteria    |                       |   | √ |
| 10. Inappropriate technology               |                       | √ |   |
| 11. Intermittent water service             |                       |   | √ |
| 12. Operation and maintenance              |                       | √ |   |
| 13. Logistics                              |                       | √ |   |
| 14. Import restrictions                    |                       |   |   |
| 15. Non-involvement of communities         |                       |   |   |
| 16. Insufficient health education efforts  |                       |   | √ |
| 17. Others (specify) - Economic activities |                       | √ |   |
